— SUMMARY

Software engineer with experience building high-performance frontend and full-stack applications across fintech, trading, and web platforms. Specialized in React, TypeScript, and real-time systems, with a strong focus on scalable UI architecture, trading workflows, and low-latency data-driven applications. Passionate about AI-driven engineering, workflow automation, and developer productivity — with hands-on experience building and integrating AI agents, reusable skills, and intelligent tooling into modern software platforms.

— EXPERIENCE

2025 – now

JPMorganChase

Software Engineer II · Greece, Hybrid

- → Built highly interactive React + TypeScript apps for traders to inspect ETF baskets, edit constituents, monitor live pricing and risk, validate trade inputs, and submit baskets into pricing & valuation engines.
- → Shipped composition editors, pricing workflows, basket management tools, and charting features powering real-time analytics and trading decisions.
- → Partnered with backend engineers to define and integrate the services behind low-latency market data, pricing, and risk calculations.
- → Built desk-specific UI extensions, persisted user-state management, validation frameworks, and comprehensive automated test coverage.
- → Drove AI-driven engineering initiatives across the equities ETF business — AI agents, reusable skills, and workflow automation to accelerate delivery.

2023 – 2025

OKTO

Front-end Developer

- → Built and maintained secure, high-performance web applications in React + TypeScript, with a focus on reusable, responsive UI components.
- → Partnered with backend, product, and design in an Agile setting to ship features that move business metrics.
- → Managed app state with Redux and Context API, keeping behavior predictable across pages.
- → Improved frontend performance with lazy loading and memoization — cut initial load time and lifted responsiveness.
- → Mentored on React + TS best practices by senior engineers; lifted code quality and team velocity.

2020 – 2023

Sportion

Junior Web Developer

- → Built fully responsive pages from scratch, in close collaboration with the design team.
- → Maintained, improved, and revamped existing landing pages.
- → Designed and shipped mobile-first features.
- → Browser testing and debugging across the matrix; fetched and handled data from APIs.

2019 – 2020

Freelance

Junior Web Developer

- → Took on small freelance projects while learning the craft. The work that started it.

— SKILLS

LANGUAGES	JavaScript, TypeScript, HTML5, CSS3, PHP, C
FRAMEWORKS	React, Redux, Context API, Next.js, jQuery, WordPress
PRACTICES	Responsive design, performance optimization, REST/GraphQL integration, automated testing, state management
AI TOOLING	AI agents, custom skills, workflow automation, developer productivity tooling

— EDUCATION

B.Eng.

Computer Science

Bachelor's degree – Greece
